

IMPACT OF FOREIGN DIRECT INVESTMENT AND INTERNATIONAL TRADE ON THE INDUSTRIAL MACHINERY AND TRANSPORT EQUIPMENT SECTOR IN VIETNAM

TEAM HOA HƯỞNG DƯƠNG

Reasons for choosing the topic

01

FDI capital flows to Vietnam mainly into the industrial sector, including the field of machinery and transportation equipment manufacturing, helping this sector to have outstanding growth in both output and product value.

International trade helps the machinery and transportation equipment manufacturing industry expand its market, reach a wide range of customers and cooperate with partners.

02

03

The last reason is that Vietnam has seen significant growth in the machinery and transport equipment industry.

Reasons for choosing the topic

01

FDI capital flows to Vietnam mainly into the industrial sector, including the field of machinery and transportation equipment manufacturing, helping this sector to have outstanding growth in both output and product value.

International trade helps the machinery and transportation equipment manufacturing industry expand its market, reach a wide range of customers and cooperate with partners.

Reasons for choosing the topic

01

FDI capital flows to Vietnam mainly into the industrial sector, including the field of machinery and transportation equipment manufacturing, helping this sector to have outstanding growth in both output and product value.

International trade helps the machinery and transportation equipment manufacturing industry expand its market, reach a wide range of customers and cooperate with partners.

02

03

Vietnam witness a remarkably growth rate in the machinery and transport equipment industry

Reasons for choosing the topic

01

FDI capital flows to Vietnam mainly into the industrial sector, including the field of machinery and transportation equipment manufacturing, helping this sector to have outstanding growth in both output and product value.

International trade helps the machinery and transportation equipment manufacturing industry expand its market, reach a wide range of customers and cooperate with partners.

02

03

The last reason is that Vietnam has seen significant growth in the machinery and transport equipment industry.

- (i) What impact does FDI have on the machinery and transportation equipment manufacturing industry in Vietnam?
- (ii) What role does international trade, here is the trade balance, play in the development of the machinery and transportation equipment manufacturing industry in Vietnam?
- (iii) What implications need to be considered to accelerate the machinery and transportation equipment manufacturing sector in Vietnam?

01. LITERATURE REVIEW

Theoretical studies

- Machinery and transportation equipment manufacturing area.
- Theoretical studies about the impact of FDI.
- Theoretical studies about the impact of international trade.

Empirical researches

- Foreign direct investment affect the machinery and transportation equipment manufacturing area.
- International trade affect the machinery and transportation equipment manufacturing area.

Justification of research gap

Theoretical studies

Machinery and transportation equipment manufacturing area

According to the OECD, the machinery and transportation equipment manufacturing sector is a part of the construction materials and equipment industry. This economic area includes: machinery, equipment, electrical appliances and their electrical components (including non-electric machines); general industrial machinery and equipment; road vehicles (including air cushion vehicles). Classified according to ISIC, machinery and transportation equipment corresponds to industry groups 29, 30, 32, 34, 35 (World Bank).

Theoretical studies

Capital accumulation

Samuelson's "vicious circle" and "external push" theories: Low savings from residents lead to low ability to accumulate capital for investment, thus labor productivity may not be improved, workers' income is low, and the country is stuck in a vicious cycle of poverty.

MacDougall - Kemp theory: when there is a shift of capital from a developed country to a developing country, the output generated can increase.

The effect of spillovers

Spillover effects refer to positive or negative external effects arising from interactions between domestic and foreign factors in the host economy.

The development of human resources

FDI enhances the quality of human resources by the need of training and forming a high-quality workforce that meets the requirements of specialized knowledge and high skills.

Supporting domestic enterprises to participate in the global value chain

The demand for input materials as well as joint venture enterprises supporting stages in the production process are very great.

Theoretical studies about the impact of FDI

Theoretical studies

Theoretical studies about the impact of international trade

Participating in international trade allows countries to make technological progress through spillover effects (Grossman and Helpman, 1991).

The presence of imported goods can be a motivation for domestic businesses to advance technologies with more efficient production processes.

The growth of capital- and technology-intensive sectors such as machinery and transportation equipment manufacturing is more closely related to the aggregate knowledge source and technological progress of the economy.

Justification of research gap

- i) There are few studies on the impact of FDI or international trade on the machinery and transportation equipment manufacturing sector.
- ii) Regarding the research model, most previous studies chose the OLS regression model. However, this model has many disadvantages such as: being sensitive to outlier data, requiring a linear relationship, having problems with multicollinearity and assuming an error-free condition.
- iii) Regarding macro factors, previous studies have not mentioned other macro factors such as GDP growth or ODA capital received.

Policy implications for improving FDI

1. Vietnam needs to have a establish strategies to selectively attract FDI capital capital with high technology content.

2. The government should support business activities of foreign investors.

3. The Vietnamese government should pay attention to improving and enhancing the quality of utility services and public services.

4. There needs to be post-investment support services.

Policy implications for improving international trade

1. Encouragement for the establishment of R&D departments at enterprises in the field of domestic machinery and transportation equipment manufacturing should be offered.

2. Free and open international trade could be promoted by continuing to participate in bilateral and multilateral Free Trade Agreements in the region.

3. For the ODA capital received, the government should have a detailed distribution plan.
